	 <p>Autograph Activities: Teacher-Demonstrations for 16-19 Autograph Activities: Teacher Demonstrations for 16-19 The fifteen teacher demonstrations will allow you dynamically to introduce, review, extend or illustrate important topics or concepts in ways not previously possible. They are intended for use on an interactive whiteboard or by means of a digital projector. The demonstrations are presented in an easy to follow, step-by-step manner, complete with full colour screenshots, suggested questions and prompts, thus allowing even a first time user to feel confident enough to deliver them. Topics covered include: Introducing Volumes of Revolution; Discovering the Chain Rule; and Things to Watch Out For when Integrating. This book will unlock the wonders of Autograph, and one thing is for sure: you will never teach these topics in the same way again. By C N Barton.</p> <p>Book comes with a CD of Support Material for each Chapter and a 30-Day Trial of Autograph 2009.</p> <p>Unit Price: \$80 (Canadian) There are bundled price discounts (see below)</p>	
	 <p>Autograph Activities: Student Investigations for 16-19 Autograph Activities: Students Investigations for 16-19 Autograph is an excellent tool for investigation, and mathematics is at its strongest and most appealing when students can embark upon such journeys of self-discovery. The ten activities are designed to allow students to fully utilise Autograph's power to explore, investigate and ultimately understand concepts at a depth which the normal classroom setting would not allow. Areas covered include vectors, differentiation, integration and trigonometry. Students are equipped with the tools to learn and then encouraged to set off alone on their epic quest for answers.
